OVERVIEW OF DT

Design thinking is a human centered approach to finding problems & then applying experimental methods to solve them creatively.

Over the past few decades, the application of design has expanded from designing products to designing services to now designing the thinking process of people. It helps people & organizations become more empathetic & agile in delivering functional & emotional value to their customers. Embracing the principles of design thinking enables a culture of faster experimentation & innovation.

Organizations that have invested in making design as their culture, have been able to deliver 211% more returns to their investors.

HOW WILL DESIGN THINKING HELP YOU?

Empathize with your audience

Empathizing with your audience will make problem-solving process meaningful & help you become more dedicated to achieving an impactful, long-term solution.

Visualizing will allow you to see relations & reveal key themes & patterns while solving a critical business problem.

Visualizing the problem

Challenge common assumptions

Question everything approach will help you break down Common Assumptions & norms to begin devising out of the box ideas instead of limiting your ideas

Turning a negative statement into positive & vice versa will help you see problems in a new light and decide what to prioritize instead of getting discouraged about major roadblocks

Reverse your thinking

Embrace risk and failure

Try to be comfortable with risk & failure because, it's only when you accept & embrace the possibility of failure that you can create truly ground-breaking ideas and solutions.

PROGRAM JOURNEY

8 weeks virtual
journey with
Capstone
project

»»» INTRO TO MODULES

MODULE 1

Introduction to Design Thinking

Outline

- Introduction
- Understanding Design
- Understand Design Thinking
- Understanding a Designer's mindset
- Secret ingredients of Design Thinking
- Explore
- Ideate
- Create
- Evolve

Application

- Case study discussion on elements of Design Thinking
- Reflection exercise

MODULE 2

Explore – Consumer needs & insights

Outline

- Introduction to design challenges
- Framing & dissecting a design challenge
- User segmentation & stakeholder mapping
- 3 step empathy approach
- Understand empathy research tools
- Empathy planning & research brief
- Draw insights using in-sighting tools
- Frame insights
- Make insights actionable through value proposition statements

Application

- Case study discussion on elements of Design Thinking
- Reflection exercise

»»» INTRO TO MODULES

MODULE 3

Ideate – Applied Creativity

Outline

- Introduction to the ideation culture
- Generate solution ideas
 - Green housing
 - Maturing ideas
 - Wild ideas
- Prioritizing solution
 - Phase 1 prioritization
 - Phase 2 prioritization (D-V-F)
 - Visual Thinking
 - Basics of sketching
 - Big idea sketch

Application

- Apply various phases & tools to ideate human centered solutions

MODULE 4

Create – Prototype, Test & Refine

Outline

- Introduction to prototyping
- Prototyping products & services
- Test to learn
- Iterate to refine

Application

- Live case study: Apply various phases & tools to create prototypes & test them with real users

»»» INTRO TO MODULES

MODULE 5

»»» TESTIMONIALS

Ajay is exceptional when it comes to client centricity. He has the unique skill to intuitively & rationally understand the stated & unstated needs & design a holistic journey which achieves the desired result. Have worked with Ajay to create Design Thinking practice at LTTS. Which we have been able to institutionalize & leverage as an organization. Ajay is a pro when it comes to Design Thinking & champions it. Would strongly recommend him for an organization which wants to embark on the Design Thinking journey.

Sonal Vaidya,
Global Head OD & Effectiveness at
L&T Technology Services

Manju Gurnani,
Senior HR Manager, SPHRi Senior
Professional in Human Resources -
(SPHRi HRCI)

Master of Design Thinking methodology. I have gone through a design thinking learning in xlri from Ajay and it has really helped me to solve my current work place problems. I would appreciate his dedication, experience and energies in helping so many companies working with them as consultant and giving them solutions. I liked the empathy he carried while conducting the class and keeping all of us well engaged. I would recommend him for his 100% dedicated skills for teaching us and also helping so many companies as consultant by applying design thinking and resolving their problems.
